Hackathon

The students are requested to produce a project proposal regarding their hackathons. Such project proposals are expected to include a draft of their requirements and a conceptual model. Proposals must be similar to the project that was developed during the autumn semester regarding the number of requirements and their complexity. Please, don't split it your project proposal into several levels; decide on the level you wish to achieve and write your statement regarding that level only.

The proposals are expected to revolve around a web information system on a domain that has not been explored in previous projects. Every group of students must work on a different domain, so it's strongly recommended that they contact a lecturer in order to get their domain assigned as soon as possible. Note that only a prospective name and summary is requested to get a domain assigned.

Proposals must be submitted to a lecturer by July 20, 2018. Please, note that this is a hard deadline and that no feedback will be provided after it. Note, too, that handling and approving a hackathon typically takes more than one week. Please, take this into account when submitting your proposal.
